### Abstract:

Purine nucleoside phosphorylase (PNP; EC: 2.4.2.1) is a key enzyme involved in the purine salvage pathway. A recent bioinformatic study by Yadav, P. K. et al. (*Bioinformation* 2012, 8(14), 664–672) reports PNP as an essential enzyme and potential drug target in community-acquired methicillin-resistant *Staphylococcus aureus* (CA-MRSA). We conducted an analysis using the methodology outlined by the authors, but were unable to identify PNP as an essential gene product in CA-MRSA. In addition, the treatment of *Staphylococcus aureus* cultures with immucillin-H, a powerful inhibitor of PNP, resulted in the non-lethal attenuation of growth, suggesting that PNP activity is not essential for cell viability.

### Background:

A recent study by Yadav, P. K. et al. used a bioinformatic approach to identify potential drug targets in community-acquired methicillin-resistant *Staphylococcus aureus* (CA-MRSA) [1]. In this work, the BLASTp program was used to search metabolically relevant gene products in CA-MRSA against the proteome of *Homo sapiens*. A collection of non-homologous gene products was generated and further refined by the identification of essential genes in the DEG 6.8 database [2]. Using this approach, Yadav, P. K. et al. identified purine nucleoside phosphorylase (PNP; EC: 2.4.2.1) as an essential enzyme and potential drug target in CA-MRSA [1].

PNP catalyzes the reversible phosphorolysis of 6-oxypurine ribonucleosides to the corresponding purine nucleobases and ribose 1-phosphate (Figure 1A) [3]. PNP is a key enzyme involved in the purine salvage pathway and is essential in humans for the formation of uric acid [3]. Our laboratory has previously investigated the catalytic mechanism and transition state structure of PNP (Figure 1B) using kinetic isotope effect (KIE) analysis [4, 5]. Transition state analysis was used in the design of transition state analogs for PNP, including immucillin-H (ImmH; Figure 1C), which is a potent inhibitor of bovine PNP ( $K_i = 23 \text{ pM}$ ) [6], human PNP ( $K_i = 58 \text{ pM}$ ) [5], and ISSN 0973-2063 (online) 0973-8894 (print)

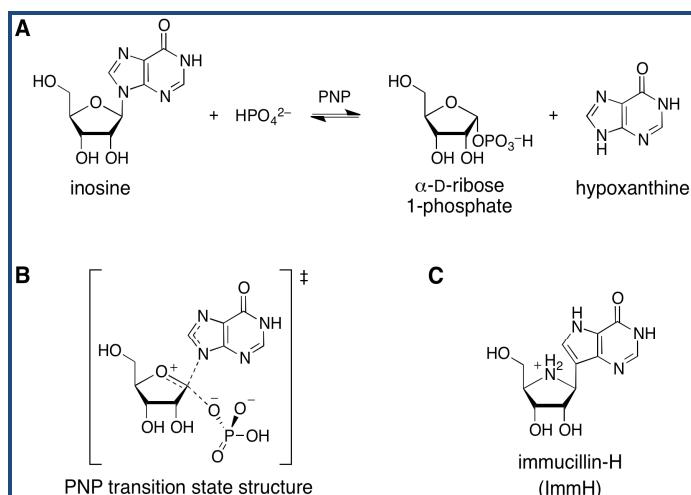

bacterial PNP ( $K_i = 28 \text{ pM}$ ; *M. tuberculosis*) [7]. ImmH is currently in clinical trials for the treatment of leukemia [8, 9].

Yadav, P. K. et al. used non-homology between gene products in CA-MRSA and *Homo sapiens* as a key parameter to select potential drug targets. We were interested to find the authors identified PNP as a candidate despite the presence of PNP homologs in both CA-MRSA (NCBI Gene ID: 1004861) and *Homo sapiens* (NCBI Gene ID: 4860). An independent analysis of the DEG 6.8 database following the methodology outlined by Yadav, P. K. et al. was unable to identify PNP as an essential enzyme in CA-MRSA. Moreover, we conducted a series of cellular growth assays using a laboratory strain of *Staphylococcus aureus* and ImmH, a potent inhibitor of PNP developed by our laboratory. These assays indicate that ImmH causes non-lethal attenuation of growth in *Staphylococcus aureus*, suggesting that PNP activity is not essential to the organism.

### Methodology:

#### Database searches

The DEG 6.8 database was accessed at URL: <http://www.essentialgene.org> and searches were executed for DEG accession number: DEG10020139.

**Figure 1:** PNP-catalyzed Phosphorolysis of Inosine and PNP Transition State Structure. **(A)** PNP catalyzes the reversible phosphorolysis of purine nucleosides to form ribose 1-phosphate and a purine nucleobase. Here, the PNP-catalyzed phosphorolysis of inosine is shown. **(B)** Transition state structure of the PNP-catalyzed phosphorolysis of inosine. **(C)** Immucillin H (ImmH) is a transition state analog and powerful inhibitor of PNP.

#### *Staphylococcus aureus* growth assays with ImmH

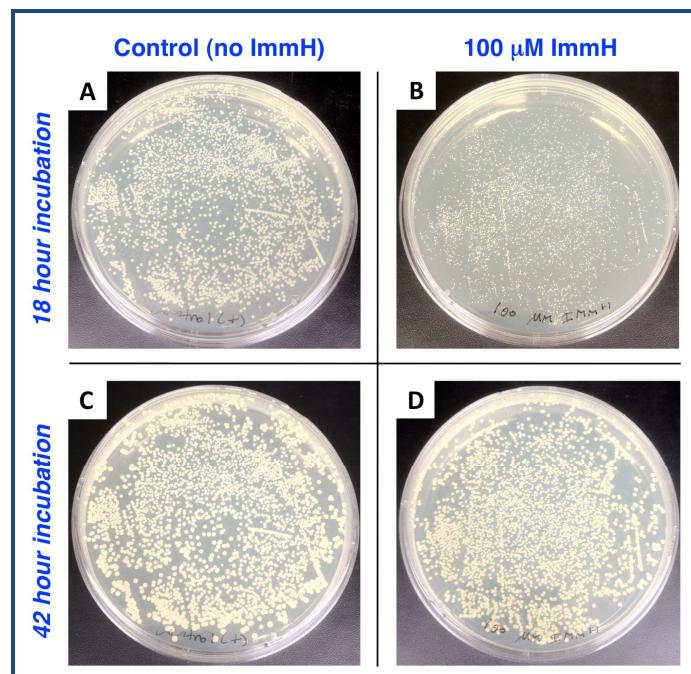

The effect of ImmH on *Staphylococcus aureus* subsp. *aureus* Rosenbach growth was assessed by comparison of bacterial cultures grown on solid media (LB agar) in the presence and absence of inhibitor. Control plates (no inhibitor) were prepared using an LB agar mix (Fisher Scientific) with no additional additives; plates containing inhibitor were prepared by adding ImmH to molten LB agar (final concentration of ImmH = 100  $\mu\text{M}$ ) just prior to pouring. Each plate of solid media was inoculated with *Staphylococcus aureus* using 30  $\mu\text{L}$  of a culture in liquid LB. The inoculated plates were incubated at 37 °C for 18 h and then removed from the incubator for analysis (**Figure 2A, B**). The plates were returned to the incubator for an additional 24 h (42 h total) and then removed for analysis (**Figure 2C, D**). All experiments on solid media were performed in triplicate and cell culture work was carried out under aseptic conditions in a laminar flow hood.

#### Discussion:

Yadav, P. K. et al. report PNP (EC: 2.4.2.1) is an essential enzyme in *Staphylococcus aureus* N315 based on identification of the gene *pnp* (DEG10020139) in the DEG 6.8 database [1]. A search of the DEG database for accession number DEG10020139 returned an entry for the gene *pnpA* (NCBI Gene ID: 1123948), which codes for polyribonucleotide nucleotidyltransferase (EC: 2.7.7.8), an enzyme that exhibits 3'-to-5' exonuclease activity. A subsequent search of the DEG database for essential genes in *Staphylococcus aureus* N315 returned 302 entries (see supplementary material). Examination of these genes failed to identify an entry for PNP (EC: 2.4.2.1). Based on these findings, we believe PNP (EC: 2.4.2.1) was incorrectly reported as an essential gene product in *Staphylococcus aureus* N315.

To investigate further the essentiality of PNP, we used ImmH to probe the effect of PNP inhibition on *Staphylococcus aureus* growth. It was found that the growth of *Staphylococcus aureus* cultures after 18 h at 37 °C was attenuated (relative to controls)

in the presence of 100  $\mu\text{M}$  ImmH (**Figure 2A, B**). This observation is consistent with ImmH acting to inhibit PNP and block the purine salvage pathway. When the same cultures were incubated for an additional 24 h at 37 °C (42 h total), bacterial growth recovered and appeared indistinguishable from the controls (**Figure 2C, D**). These data suggest the inhibition of PNP is non-lethal to *Staphylococcus aureus*, but rather only slows bacterial growth. Based on these results, we propose that PNP is not an essential enzyme in *Staphylococcus aureus* and that the inhibition of PNP activity can be compensated for by *de novo* nucleoside biosynthesis.

**Figure 2:** Effect of ImmH on *Staphylococcus aureus* Growth. **(A)** Growth of *Staphylococcus aureus* after 18 h incubation at 37 °C (Control / no ImmH). **(B)** Growth of *Staphylococcus aureus* in the presence of 100  $\mu\text{M}$  ImmH after 18 h incubation at 37 °C. **(C)** Growth of *Staphylococcus aureus* after 42 h incubation at 37 °C (Control/no ImmH). **(D)** Growth of *Staphylococcus aureus* in the presence of 100  $\mu\text{M}$  ImmH after 42 h incubation at 37 °C.

#### Conclusion:

In conclusion, we believe PNP (EC: 2.4.2.1) was incorrectly cited as an essential enzyme in CA-MRSA by Yadav, P. K. et al. A follow-up analysis using the methodology outlined by the authors was unable to identify PNP as an essential enzyme in CA-MRSA, but instead found the correct citation should be for polyribonucleotide nucleotidyltransferase (EC: 2.7.7.8). In addition, cellular growth assays using ImmH, a potent inhibitor of PNP, suggest that inhibition of PNP activity is not lethal to *Staphylococcus aureus*. These data further suggest that PNP is not an essential enzyme in *Staphylococcus aureus* and thus, may be of limited use as a therapeutic target in CA-MRSA.

176	DEG10020176	<i>greA</i>	Transcription elongation factor GreA
177	DEG10020177	<i>SA1445</i>	conserved hypothetical protein
178	DEG10020178	<i>alaS</i>	alanyl-tRNA synthetase
179	DEG10020179	<i>SA1449</i>	(5-methylaminomethyl-2-thiouridylate)-methyltransferase
180	DEG10020180	<i>SA1450</i>	Iron-sulfur cofactor synthesis protein homolog
181	DEG10020181	<i>aspS</i>	aspartyl-tRNA synthetase
182	DEG10020182	<i>hisS</i>	histidyl-tRNA synthetase
183	DEG10020183	<i>obg/obgE</i>	Spo0B-associated GTP-binding protein
184	DEG10020184	<i>rpmA</i>	50S ribosomal protein L27
185	DEG10020185	<i>rplU</i>	50S ribosomal protein L21
186	DEG10020186	<i>valS</i>	valine-tRNA ligase
187	DEG10020187	<i>hemB</i>	Delta-aminolevulinic acid dehydratase
188	DEG10020188	<i>hemC</i>	porphobilinogen deaminase
189	DEG10020189	<i>rplT</i>	50S ribosomal protein L20
190	DEG10020190	<i>rpmI</i>	50S ribosomal protein L35
191	DEG10020191	<i>infC</i>	translation initiation factor IF-3 infC
192	DEG10020192	<i>thrS</i>	threonyl-tRNA synthetase 1
193	DEG10020193	<i>SA1509</i>	Conserved hypothetical protein
194	DEG10020194	<i>gapB</i>	Glyceraldehyde-3-phosphate dehydrogenase 2
195	DEG10020195	<i>polA</i>	DNA polymerase I
196	DEG10020196	<i>pykA</i>	pyruvate kinase
197	DEG10020197	<i>pfk/pfkA</i>	6-phosphofructokinase
198	DEG10020198	<i>accA</i>	Acetyl-CoA carboxylase, carboxyl transferase, alpha subunit
199	DEG10020199	<i>SA1523</i>	acetyl-CoA carboxylase transferase beta subunit
200	DEG10020200	<i>SA1524</i>	Malate dehydrogenase homolog
201	DEG10020201	<i>dnaE</i>	DNA polymerase III, alpha chain
202	DEG10020202	<i>ackA</i>	Acetate kinase homolog
203	DEG10020203	<i>rpsD</i>	30S ribosomal protein S4
204	DEG10020204	<i>serA</i>	Phosphoglycerate dehydrogenase
205	DEG10020205	<i>tyrS</i>	tyrosyl-tRNA synthetase
206	DEG10020206	<i>acsA</i>	Acetyl-CoA synthetase
207	DEG10020207	<i>ccpA</i>	Catabolite control protein A
208	DEG10020208	<i>murC</i>	UDP-N-acetylmuramate-alanine ligase
209	DEG10020209	<i>SA1563</i>	phenylalanyl-tRNA synthetase (beta subunit) homolog
210	DEG10020210	<i>leuS</i>	leucyl-tRNA synthetase
211	DEG10020211	<i>metK</i>	S-adenosylmethionine synthetase
212	DEG10020212	<i>ampS</i>	aminopeptidase ampS
213	DEG10020213	<i>vraS</i>	two-component sensor histidine kinase
214	DEG10020214	<i>map</i>	Methionine aminopeptidase
215	DEG10020215	<i>SA1713</i>	RNA methyltransferase homolog
216	DEG10020216	<i>gatB</i>	glutamyl-tRNAGln amidotransferase subunit B
217	DEG10020217	<i>SA1716</i>	glutamyl-tRNAGln amidotransferase subunit A
218	DEG10020218	<i>lig</i>	DNA ligase
219	DEG10020219	<i>pcrA</i>	ATP-dependent DNA helicase
220	DEG10020220	<i>purB</i>	adenylosuccinate lyase
221	DEG10020221	<i>nadE</i>	NAD synthetase, prefers NH3 over glutamine
222	DEG10020222	<i>SA1747</i>	similar to ABC transporter, ATP-binding protein
223	DEG10020223	<i>SA1792</i>	Single-strand DNA-binding protein
224	DEG10020224	<i>groES</i>	Protein fate: Protein folding and stabilization
225	DEG10020225	<i>vga</i>	Hypothetical ABC transporter ATP-binding protein
226	DEG10020226	<i>SA1854</i>	similar to O-sialoglycoprotein
227	DEG10020227	<i>kdpA</i>	potassium-transporting ATPase subunit A

228	DEG10020228	SA1885	hypothetical protein, similar to ATP-dependent RNA helicase
229	DEG10020229	<i>murF</i>	UDP-N-acetylmuramoylalanine-D-glutamyl-lysine-D-alanyl-D-alanine ligase
230	DEG10020230	<i>ddlA/ddl</i>	D-Alanine-D-alanine ligase
231	DEG10020231	<i>murA</i>	UDP-N-acetylglucosamine 1-carboxyvinyl transferase 1
232	DEG10020232	<i>atpF</i>	ATP synthase B chain
233	DEG10020233	<i>upp</i>	uracil phosphoribosyl transferase
234	DEG10020234	<i>glyA</i>	serine hydroxymethyl transferase
235	DEG10020235	<i>prfA</i>	peptide chain release factor 1
236	DEG10020236	<i>tdk</i>	thymidine kinase
237	DEG10020237	<i>rpmE/rpmE2</i>	Ribosomal protein L31
238	DEG10020238	<i>rho</i>	Transcription termination factor Rho
239	DEG10020239	<i>fbaA</i>	fructose-bisphosphate aldolase
240	DEG10020240	SA1939	deoxyribose-phosphate aldolase
241	DEG10020241	SA1957	conserved hypothetical protein
242	DEG10020242	<i>glmS</i>	Glucosamine-fructose-6-phosphate aminotransferase
243	DEG10020243	<i>mtlA</i>	Mannitol PTS EII
244	DEG10020244	<i>mtlD</i>	mannitol-1-phosphate 5-dehydrogenase
245	DEG10020245	SA1966	conserved hypothetical protein
246	DEG10020246	<i>lacA</i>	galactose-6-phosphate isomerase LacA subunit
247	DEG10020247	<i>rpsI</i>	30S ribosomal protein S9
248	DEG10020248	<i>rplM</i>	50S ribosomal protein L13
249	DEG10020249	SA2019	Conserved hypothetical protein
250	DEG10020250	SA2020	Hypothetical protein
251	DEG10020251	<i>rplQ</i>	50S ribosomal protein L17
252	DEG10020252	<i>rpoA</i>	DNA-directed RNA polymerase alpha chain
253	DEG10020253	<i>rpsK</i>	30S ribosomal protein S11
254	DEG10020254	<i>rpsM</i>	30S ribosomal protein S13
255	DEG10020255	<i>rpmJ</i>	50S ribosomal protein L36
256	DEG10020256	<i>infA</i>	translation initiation factor IF-1
257	DEG10020257	<i>adk</i>	adenylate kinase
258	DEG10020258	<i>secY</i>	preprotein translocase SecY subunit
259	DEG10020259	<i>rplO</i>	50S ribosomal protein L15
260	DEG10020260	<i>rpmD</i>	50S ribosomal protein L30
261	DEG10020261	<i>rpsE</i>	30S ribosomal protein S5
262	DEG10020262	<i>rplR</i>	50S ribosomal protein L18
263	DEG10020263	<i>rplF</i>	50S ribosomal protein L6
264	DEG10020264	<i>rpsH</i>	30S ribosomal protein S8
265	DEG10020265	<i>rpsN</i>	30S ribosomal protein S14
266	DEG10020266	<i>rplE</i>	50S ribosomal protein L5
267	DEG10020267	<i>rplX</i>	50S ribosomal protein L24
268	DEG10020268	<i>rplN</i>	50S ribosomal protein L14
269	DEG10020269	<i>rpsQ</i>	30S ribosomal protein S17
270	DEG10020270	<i>rpmC</i>	50S ribosomal protein L29
271	DEG10020271	<i>rplP</i>	50S ribosomal protein L16
272	DEG10020272	<i>rpsC</i>	30S ribosomal protein S3
273	DEG10020273	<i>rplV</i>	50S ribosomal protein L22
274	DEG10020274	<i>rpsS</i>	30S ribosomal protein S19
275	DEG10020275	<i>rplB</i>	50S ribosomal protein L2
276	DEG10020276	<i>rplW</i>	50S ribosomal protein L23
277	DEG10020277	<i>rplD</i>	50S ribosomal protein L4
278	DEG10020278	<i>rplC</i>	50S ribosomal protein L3
279	DEG10020279	<i>rpsJ</i>	30S ribosomal protein S10
280	DEG10020280	<i>ureA</i>	Urease gamma subunit
281	DEG10020281	<i>ureB</i>	Urease beta subunit
282	DEG10020282	<i>ureC</i>	Urease alpha subunit
283	DEG10020283	SA2156	L-Lactate permease lctP homolog
284	DEG10020284	<i>narG</i>	Respiratory nitrate reductase alpha chain
285	DEG10020285	<i>fmhA</i>	fmhA protein
286	DEG10020286	<i>opuCA</i>	glycine betaine/carnitine/choline ABC transporter
287	DEG10020287	<i>opp-1D</i>	oligopeptide transporter putative ATPase domain

288	DEG10020288	<i>SA2279</i>	hypothetical protein, similar to phosphomannomutase
289	DEG10020289	<i>gntK</i>	gluconokinase
290	DEG10020290	<i>ptsG</i>	PTS system, glucose-specific IIABC component
291	DEG10020291	<i>clpL</i>	ATP-dependent Clp proteinase chain ClpL
292	DEG10020292	<i>copA</i>	Copper-transporting ATPase copA
293	DEG10020293	<i>ldh</i>	L-Lactate dehydrogenase
294	DEG10020294	<i>gbsA</i>	Glycine betaine aldehyde dehydrogenase gbsA
295	DEG10020295	<i>SA2434</i>	fructose phosphotransferase system enzyme fruA homolog
296	DEG10020296	<i>pmi</i>	Mannose-6-phosphate isomerase
297	DEG10020297	<i>SA2442</i>	preprotein translocase SecA homolog
298	DEG10020298	<i>vraD</i>	hypothetical protein, similar to ABC transporter
299	DEG10020299	<i>gidB</i>	Glucose inhibited division protein B
300	DEG10020300	<i>gidA</i>	glucose inhibited division protein A
301	DEG10020301	<i>rnpA</i>	Ribonuclease P - protein component
302	DEG10020302	<i>rpmH</i>	50S ribosomal protein L34
