Ph.D. Thesis

TOWARDS ZERO EMBARGO ON TECHNOLOGY THROUGH OPEN ACCESS ACADEMIC PUBLICATION: AN INDIA PERSPECTIVE

Submitted by Senkuttuvan Pavithra

Supervised by

Prof. Dr. Pandjassarame Kangueane PhD

Prof. Dr. Suresh Mani PhD

(July, 2026)

ABSTRACT

Available data on science is constantly gleaned for gathering valuable information to create concise yet precise knowledge on specific subjects (especially, the biology-oriented agriculture and biomedicine) for service in the society. These sacrifices surmount as success stories for scientists worldwide. Data in the form of known literature plays a radical role in serving the society with improved infrastructure and facilities making associated resources available, accessible and affordable. This is possible by making known literature available and accessible for application in a modern economy dominant with features of democratic socialism. The public investment from tax payers coupled with the privately propelled commercial factions involved in the gathering, archiving and distribution of known literature data is complex in its current status quo in the context of creating a harmonious society with optimal social benefits. It should be noted that the role played by indirect, unorganized, unskilled and unaccounted farmers, farm labourers and service men in different layers of the supply chain in accordance with demand and supply is highly imperative. Therefore, it is of interest for a comprehensive discussion on issues in making known literature available and accessible for application towards the benefit of the society through open access publishing models within the acceptable ethical frameworks of Creative Commons (CC) and Committee on Publication Ethics (COPE). Thus, Open access to known literature is critical for creating a harmonious society across continents on planet earth. However, this objective is not simple. Therefore, it is of interest to document the challenges and linked features in promoting open access to literature.

Scholarly communication of data is important for advancement of science. This is done using scholarly journal platforms promoted and managed by publishers. Further, many of these journals are indexed in commercial databases such as WoS from Clarivate Inc. (Canada),

SCOPUS from Elsevier Inc. (Netherlands) and several others. This inclusion is selective based on criteria defined by Clarivate Inc. and Elsevier Inc. in their capacity as private business entities. Moreover, inclusion is claimed to be representative by both parties. However, it is not comprehensive and they have large scale business activities in India. Furthermore, there is a huge hype among the scientific community and educational institutions for using data in these databases for selecting journals for scholarly communication. The WoS and SCOPUS databases have included about 300 Indian Journals. This accounts for about 1.4% journals in the database. Nonetheless, about 68% of these journals are closed access and it is managed by foreign publishers such as Wolter Kluwer, Springer, Elsevier, Francis and Taylor etc. This is a 2026 concern for technological embargo while balancing creativity and freedom of expression.

It should be noted that it is a pointless pondering (thinking) on predatory (meaning greedy) publications (meaning journals) while practicing publishing through freedom of expression and or the Press where applicable. A weak publication will vanish (disappear) itself in an open access publishing model where contents are made available for free on the WWW. The fundamental question in this context is the definition of host (congregation) and predator (intruder). The second question is the type (data and or commercial) and subsequent measure of effect of the predator on the host. Detailed discussion on this issue or any other related issue is welcomed under the freedom of the Press yet conclusion on it will be often biased and is clearly unwarranted. The parties aware of such concerns should write to the publisher (with address for communication) to take such action within such time to stand corrected. Please be informed that ISSN is unique for each publication and portals for ISSN is distributed throughout the world in each country. This is well monitored and clearly streamlined. Therefore, NO two publication titles will be identical. Awareness from authors on misleading or misinformed or misrepresented ISSN is important and such information should

be petitioned to ISSN and portals for ISSN that is distributed throughout the world with state mechanisms to monitor such activities. Academia should be self-aware on these issues and have discussions on the quality and quantity of data taken to the context. *Caveat Emptor* is applicable to a considerable extend among the literate community as in this case. The only problem could arise because of compromised (unregistered or mirrored) ISSN number published on the WWW which is already well regulated through DNS lookup. Therefore, parties concerned about ethical issues on scientific publishing should write to concerned publishers with known address to stand corrected or to ISSN and portals for ISSN or to DNS lookup where address is not available to correct such issues through available state mechanisms. Hence, biased advisory notes from government representations, society sponsored mass campaign through news/TV media and academic miss representation based on data collected by an individual without physical address for communication is clearly unwarranted in this regard.

Keywords

Society, science, service, stories, literature, open access (gold, platinum, green), challenges, data analytics, WoS, SCOPUS, freedom of expression, citation, impact factor, India, predatory, greedy, publications, journals, ISSN, DNS, Asia, article 19 constitution of India, ISBN, newspaper, GST, HSN, *caveat Emptor.*

STUDENT DECLARATION

I, Senkuttuvan Pavithra, declare that the PhD thesis entitled “Towards Zero Embargo on Technology Through Open Access Academic Publication: An India Perspective” is no more than 100,000 words in length, including quotes and exclusive of tables, figures, appendices, bibliography, references and footnotes. This thesis contains no materials that has been submitted previously, in whole or in part, for the award of any other academic degree or diploma. Except where otherwise indicated, this thesis is my own work.

About Senkuttuvan Pavithra

The Candidate

Senkuttuvan Pavithra is an Indian commerce researcher and author who focuses on academic publishing, scholarly journals, and higher education metrics.

Academic Background

Education:

She earned her Bachelor of Commerce degree in 2016.

Post-Graduation:

She later completed her Master of Commerce degree in 2018.

Institution:

Both of her degrees were completed at Pondicherry University in the Union Territory of Puducherry, India.

Key Research Focus

She has worked alongside prominent academic co-authors, such as Pandjassarame Kangueane, on research related to Indian scientific journals.

Her published works mainly cover:

Open Access Issues:

Studying how public access to Indian journals listed in major databases is restricted.

List of Publication:

[1] Kangueane P & Pavithra S. Pointless pondering on predatory publications *Bioinformation*. 2020 **16**:342 [PMID: 37197097]

[2] Kangueane P & Pavithra S. Science for service in a society is the success story of scientists with serenity. *Bioinformation.* 2020 **16**:34 [PMID: 32025160]

[3] Bisht YS, Singh R, Pavithra S, Monisha S, Kameshwari M, Kamaleshwari M, Yogasri T, Nisha A, Vishnu Priya M, Viji A, Majority of scholarly journals from India in WoS and SCOPUS are closed access and promoted by foreign publishers: A 2026 concern on technological embargo *Bioinformation*. 2026 **22**: 2502 [PMID: 42109372]

[4] Pavithra S & Kangueane P. Challenges and other linked features in promoting open access to bioinformation literature over about 2 decades *Bioinformation.* 2022 **18**:525 [PMID: 37168779]

About Prof. Dr. Pandjassarame Kangueane

Advisor

Dr. Pandjassarame Kangueane is an Indian scientist, professor, author, editor, and entrepreneur who is a prominent figure in the fields of biotechnology and bioinformatics. He is best known as the Managing Director of Biomedical Informatics and the Founding Editor-in-Chief of Bioinformation, a well-known peer-reviewed, open-access scientific journal.

Career & Leadership Biomedical Informatics:

He has served as the Director and Managing Director of Biomedical Informatics (P) Ltd. since 2006, leading efforts to design short peptide vaccines and health solutions.

Academic Experience:

He worked as a professor at Nanyang Technological University (NTU) in Singapore and has taught at multiple institutions, including VIT University in Vellore.

Journal Editing:

Alongside his work at Bioinformation, he has also contributed as an Associate Editor for BMC Bioinformatics in the UK. Research Focus Dr. Kangueane’s research bridges the gap between biology and computer science.

His main scientific contributions include:

Vaccine Design: Developing methods for human leukocyte antigen (HLA) peptide binding predictions to assist in creating T-cell epitope vaccines.

Protein Interactions: Exploring how protein structures, shapes, homodimer folding, and domain-domain interfaces work.

Enzyme Analysis: Researching the molecular dynamics and stereo-specificity of enzymes like Candida rugosa lipase.

Published Books: He has authored and edited notable academic textbooks, including:

Bioinformatics: A Concept-Based Introduction (Springer, 2008)

Bioinformation Discovery: Data to Knowledge in Biology (Springer, 2018) Protein-Protein and Domain-Domain Interactions (Springer)

About Prof. Dr. Suresh Mani

Advisor

Dr. Suresh Mani, Physiotherapist, PhD: An Associate Dean and Professor at the School of Physiotherapy at Lovely Professional University (LPU) in Punjab. He is a prominent researcher in orthopaedic and neurological rehabilitation, tele-rehabilitation, and biomechanics.

ACKNOWLEDGEMENT

I would like to extend my sincere appreciation to all members of Biomedical Informatics Private Limited for all support since 2018. I would like to thank Dr Pandjassarame Kangueane for his guidance help, blessing and love throughout this period. I also extend my thanks to Dr Suresh Mani for his valuable advice on this thesis. I thank Dunster Business School, Switzerland for this opportunity. I thank Thangamani Yogasri, Sivakumar Monisha, Senkuttuvan Prideep, Anandhan Viji, Santhakumar Pavithra and several others who helped me in this endeavour. I thank my younger brother Senkuttuvan Prideep for his care, love, affection and his little little support. I thank my mother Senkuttuvan Palaniamma @ Shanthi and my father Narayanan Senkuttuvan for their love and care throughout my life. I thank Saradha Gangadharan Arts and Science College, Pondicherry University for their service during my undergraduate and graduate education. I also thank ACDYON TECHNOLOGIES, INDIA for their coordination in this regard.

Chapter 1

Introduction

1.1 Science for service in a society:

The world is passing through a difficult crossroad with multiple issues of concern with heated debates on Inflation (price rise), Fiscal (financial) deficit (shortage) and import dependency world-wide **[1]**. We need food in surplus, clothing, shelter, healthcare, education and entertainment towards a spiritual life **(Figure 1.1)**. These essential resources could be achieved by advancing and applying known science **[2]**. We are trying to take services and products to the international market with pride and respect where inequality is common **(Figure 1.2; Figure 1.5 and Figure 1.6)**. This will create a situation where exports balance imports by strengthening equality, freedom and liberty in a global scenario under the provisions of the United Nations **[3]**. Therefore, the role of technology for socio-economic development is critical through strong science and established knowledge. This is possible through learning, understanding and adding knowledge to known scientific information.

1.2 Academic Literature Data:

The access to known scientific literature through available resources such as the products of Routledge **[4]**, Springer **[5]**, Elsevier **[6]**, Taylor and Francis **[7]**, Peter Lang **[8]**, Sage **[9]**, Wiley-Blackwell **[10]**, SciELO **[11]**, Cambridge University Press **[12]**, Oxford University Press **[13]**, Clarivate Analytics Inc. **[14],** Hindawi **[15]**, Frontiers **[16]**, EBSCO **[17**] Biomedical Informatics (P) Ltd **[18]**, PLOS **[19]**, World Scientific **[20]**, AAAS **[21]**, New Scientist Ltd. **[22]**, Cell Press **[23]**, NAS **[24]** and several others is essential **(Table 1.1)**.

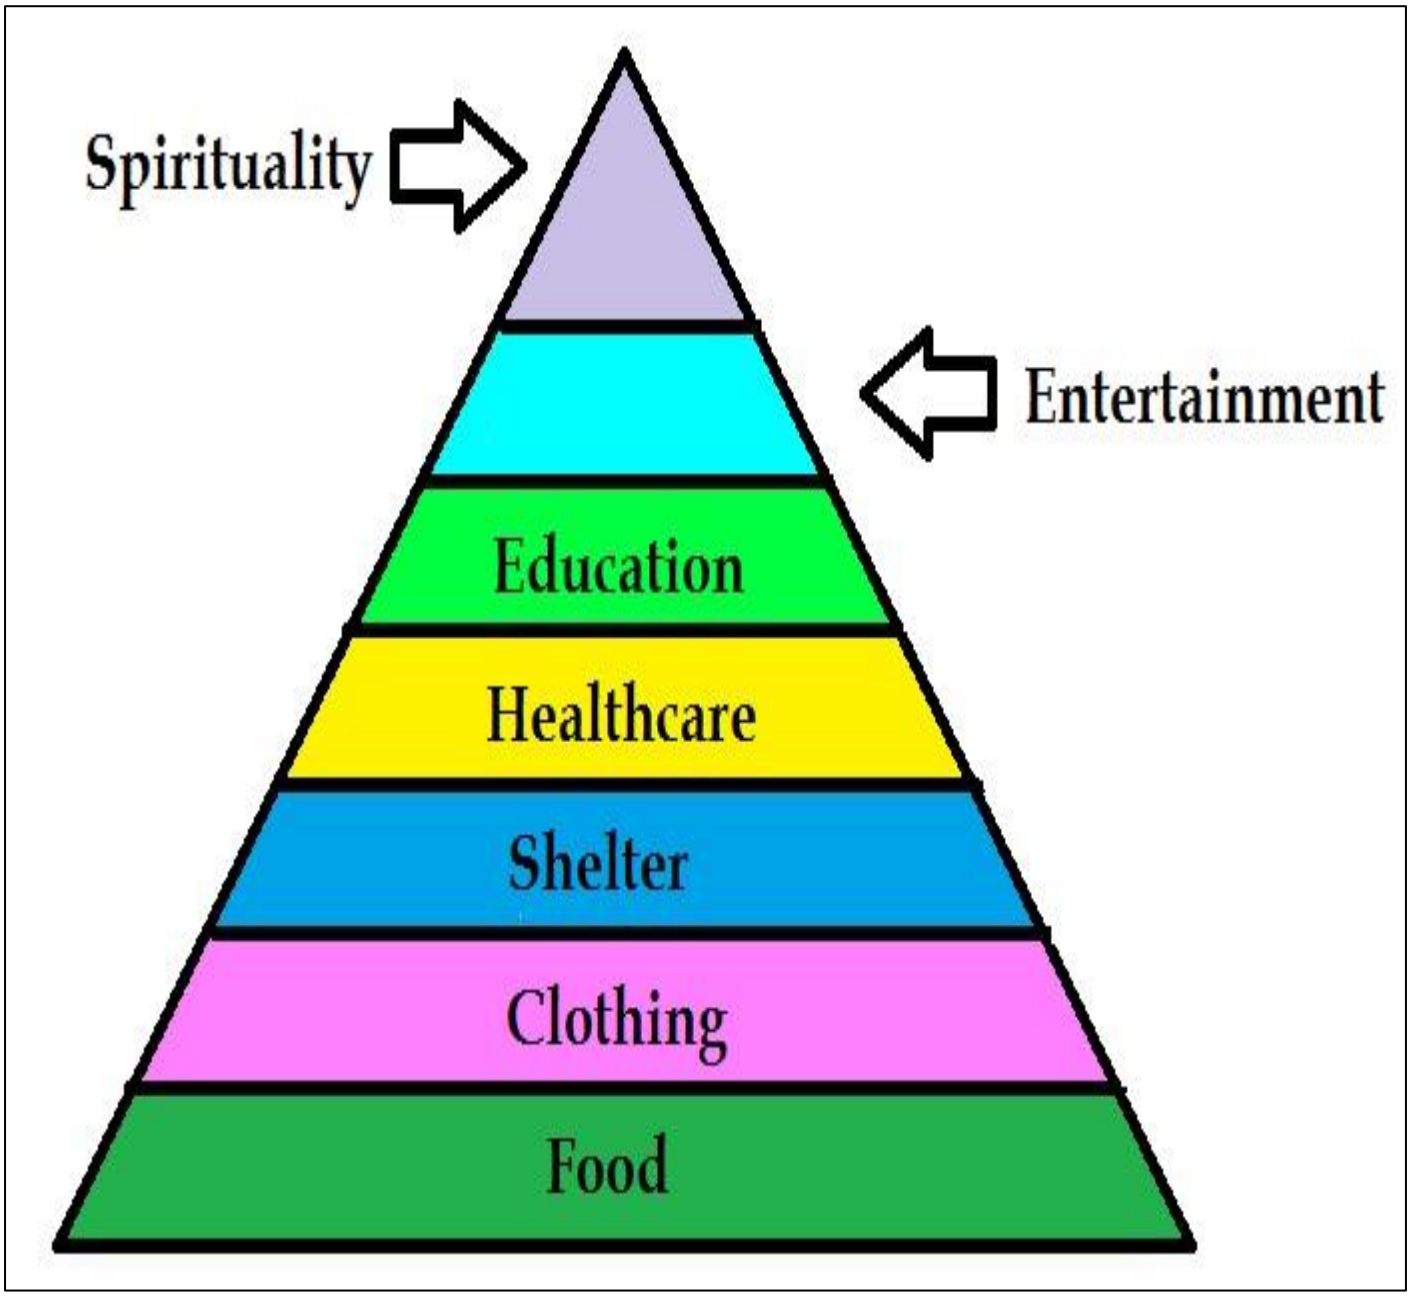

Figure 1.1: Essential needs of the society in different layers represented with varying area corresponding to the parameters stated. The interplay between there parameters help create social harmony.

1.3 Data Commerce:

There is a commercial aspect in making this service available to the affordable elite students and scholars **(Table 1.1)**. It should be noted that revenue data for these companies is taken from elsewhere **[25]** as on January 25, 2020. These resources are often expensive and their access is restricted to premier institutions worldwide. This should be made available worldwide through open access models as summarized by DOAJ **[26]**.

1.4 Open Access to Literature:

The US health department promotes open access databases and literature resources such as NCBI **[27]**, NLM **[28]**, PubMed **[29]**, Medline **[30]** and PubMed Central (PMC) **[31]** for free over the Internet. Japan maintains the DDBJ database **[32]** and Europe supports the EBI/EMBL databases **[33].** Many such initiatives have to be encouraged in other regions of the world including South America, Asia, Australia and Africa. The availability, accessibility and applicability of these resources are indispensable to modern economy. Hence, there is a need for more participation from the growing youth for the advancement of science to develop engineering and technology with improved precision for application in all areas of the society especially, in agriculture and healthcare. Our current challenges are unique, complex and multi-faceted in nature. These were not dealt by us in the past. We have to create novel ideas and procedures with upheld values that suit our current requirements by taking appropriate lessons where available and required. We live in a multi-lingual globe where contributions through every language have to be acknowledged and nurtured and encouraged with the help of a common binding language using enriched scientific data with an international perspective. We are all good in something. We have to give and take resources and associated data in a just and fair manner by up-holding international justice. Access to available literature for advancement through the application of science for the society is secretly sensitive yet sacred. The quote from BOAI "the promise was that

removing access barriers would allow the world to "accelerate research, enrich education, share the learning of the rich with the poor and the poor with the rich … and lay the foundation for uniting humanity in a common intellectual conversation and quest for knowledge" explains everything **[34].** Thus, the formation of several open access (free to read) journals through the initiatives like PMC is engaging, entertaining and enlightening for everyone **[31].**

1.5 Biomedical Data:

The biology-oriented agriculture **(Figure 1.3 and Figure 1.4)**, food processing and health care heavily depend on scientific literature in a sensitive manner. This is because concepts of mathematics, physics and chemistry are often utilized to understand complex issues in biology with an inter-disciplinary approach. Thus, science is important for everyone in daily life through an organized administrative structure. Hence, we need increased revenue receipt for spending in science, technology, agriculture and healthcare on par with international standards and benchmarks. The participation of every youth in an informed administration is vital. This is important for developing a happy society with an enduring harmony. John Adams declared the constitution and Thomas Jefferson wrote the constitution. Our era benefited freedom, equality and liberty from democracy without serious conflicts and war with the blessings of the Almighty. Honesty, hard work and perseverance served as slogans for success for billions of people around the world. We came with nothing to get something and go with nothing at the end. This is life from beginning to ending. However, the quote from Jawaharlal Nehru **[35]** "… but as long as there are tears and suffering, so long our work will not be over." remains as our duty until the time we pass the burning torch to the next generation willing to hold it strong for peace and prosperity.

Figure 1.2: Reflection of poverty (top) and prosperity (bottom) at Chennai, Tamil Nadu, India.

Table 1.1: Data on major arts and science publisher.

S. No.	Publisher Name	Location	Year*	Revenue data [25]	References

*Year of Incorporation. Many of these organisations have business operations in India

1.6 Data Ethics and Integrity:

It is of interest for a comprehensive discussion on issues to make known literature available and accessible for social application through open access publishing models within the ethical guidelines of Creative Commons (CC) **[36]** and Committee on Publication Ethics (COPE) **[37].** Hence, data related to these issues with improved essential resources in a representative manner for societies across the world for eradicating poverty by upholding freedom, equality and liberty with natural justice is needed.

1.7 Open access (OA):

Access to available literature for advancement through the application of science for the society is secretly sensitive yet sacred. The quote from BOAI "the promise was that removing access barriers would allow the world to "accelerate research, enrich education, share the learning of the rich with the poor and the poor with the rich … and lay the foundation for uniting humanity in a common intellectual conversation and quest for knowledge" explains everything as described elsewhere **[34]**. Thus, the formation of several open access (free to read) journals through the initiatives like PMC is engaging, entertaining and enlightening for everyone as listed elsewhere **[31]**.

1.8 Open access (OA) and Scientific community:

It is the responsibility of all stakeholders and beneficiaries especially the scientific community (advanced teaching and research) to make all reports available for the general public (tax payers (direct or indirect)). Please be informed that all the about 8 billion **[38]** people pay tax or render service for tax in one way or the other. Open access is a joint responsibility of all stakeholders in this context.

Figure 1.3: Carbohydrate rich paddy cultivation to harvest. System of rice intensification (SRI) during growth (Top); Heap of paddy produce stored after harvest (Bottom) is shown. Thus, application of science technology for food production is imperative.

Figure 1.4: Cultivation to processing of protein rich green grams. Large scale production of green gram is essential using available technologies. Automated processing of Agriculture procedure is key to food security and social harmony.

1.9 Science, Scientist, Society and Service:

Science for service in a society is the success story of scientists with serenity as described elsewhere **[39]**. The commerce in science publishing is highlighted in this note. Science is not for the self-success of scientists and it is for the society especially to serve the under privileged population. Please be informed that farmers and farm workers contribute to tax money (either direct or indirect) that is used for science and its advancement in all economies (developed, developing and under developed). Therefore, the research notes from science funded by tax payers should be made available and accessible to the kins of all tax payers. It should be noted that all members of the globe participate (direct and indirect) in a democracy through contribution with pride and respect.

1.10 Author contributions in Biology:

Biology is a complex subject with many unknown facts. So, there is a need to expand the scientific community across continents. Therefore, liberal engagement of scientific views across continents through open access publishing models is highly pertinent in the modern socio-economic setup.

1.11 Freedom of Expression:

Article 19 of Constitution of India states "It is the principle that communication and expression through various media, including printed and electronic media, especially published materials, should be considered a right to be exercised freely. Such freedom implies the absence of interference from an overreaching state; its preservation may be sought through constitutional or other legal protections" described elsewhere **[39]**.

Figure 1.5: A rural primary school at the Union tertiary of Puducherry, India.

Figure 1.6: Food (Vegetable rice) distribution in rural India through open house. A Charity work towards food security in India.

1.12 Role of Governments:

Role of government should be neutral by upholding freedom of the press (expression and human rights) and natural justice as per article 10 of the constitution of UK or article 19 of the constitution of India. Governments or representatives of governments should stay away from blocking Freedom of the Press (expression). Government notifications in any form in relation to as hindrance to the freedom of the press are unwarranted. It is often biased to certain parties and it is unconstitutional in nature. It should be noted that all publications are classified as New Papers under the GST schedule. Hence, biased notifications favouring certain parties in commerce are unwarranted. It should be noted that science for service in a society is the success story of scientists with serenity as described elsewhere **[39]**. Hence, engagement is essential.

1.13 Academic Freedom:

It should be informed that academic freedom is an integral part of an academy where views and opinion of academicians should be entertained in a free and fair manner. This will accelerate discovery and innovations with improved service having optimal checks and balances where required with transparency. Members of the academy have tools such as the RTI and the Honourable ombudsman **[41]** in all known democracies with modern civilization within the ambit of the UN charter. Members should write to such authorities for such rights using a multi-faceted modus operandi to sustain natural justice. The role of heads (Directors, Vice Chancellors, and Presidents) of institutions (government or non-government) is critical even if voluminous (huge) in nature. Members of the academy should follow general guidelines (These are not hard and fast rules. This may be local in perspective) as per natural justice.

1.13.1 Note on service:

It should be noted that everyone is working or providing service or rendering their skills for a price in a social democracy with pride, equality, freedom and liberty.

1.14 Declaration by authors on publication ethics for submission:

The authors declare that they adhere with COPE guidelines on publishing ethics as described elsewhere **[36]**. The authors also undertake that they are not associated with any other second or third parties (governmental or non-governmental agencies) linking with any form of unethical issues or activities connecting to this publication. The authors also declare that they are not withholding any information that is misleading to the publisher in regard to their submission.

1.15 Content Licensing:

This is an Open Access Journal which permits unrestricted use, distribution, and reproduction in any medium, provided the original work is properly credited. This is distributed under the terms of the Creative Commons Attribution License **[37].**

1.16 Publishing Ethics:

The journal adheres to COPE guidelines on publishing ethics as described elsewhere **[36].** It is the responsibility of the authors and especially the corresponding author to adhere to all forms of publishing ethics.

1.17 Processing Speed:

Manuscripts are processed immediately within hours from the time of submission so as to make a final decision within 14 days after rigorous checking and editorial (and/or) peer reviews.

1.18 Presentation of a manuscript:

Writing Quality:

Writing should be highly critical, concise, coherent, precise, specific and direct to the context.

1.18.1 Background data:

Each statement (except for the last 1 or 2 statements) made under background needs a valid and a closely relevant reference where possible. Please refrain (meaning avoid) from making general statements.

1.18.2 Short conclusion:

Conclusion should be simple and direct in not more than 2-3 statements. Statements should be coherent (connect with one another).

1.18.3 Plagiarism Check:

The journal uses several available searches (TEXT Pattern Matching AND (OR) Natural Language Processing (NLP)) tools (COMMERCIAL and (or) FREE) enabled with representative databases. This is in addition to manual (editorial) screening through reading for adequate validation where possible. Please be informed that "inappropriate text recycling" in Abstract, Background, Results, Discussion, Conclusion, Table Captions and Figure Legends are NOT ALLOWED.

1.18.4 Review Process:

All manuscripts **[42]** are processed immediately using Scholar One (Clarivate Analytics, Inc.) **[14]** and is subjected to editorial (ONE or more) and (or) "closely relevant peer" (ONE or more) reviews where required. Please be informed that Publons **[43]** has become an integral

part of Web of Science and hence Scholar One uses Publons for reviewer selection in addition to author suggested reviewers.

1.18.5 Timely Peer Review:

This is very important. Peer review is done on a voluntary basis thanks to the peer reviewers who entertain such services in the interest of data quality. Peer review should be fair, just and timely. Databases such as Publons in Scholar One (Clarivate Analytics, Inc.) **[14]** help scrawl for hundreds of relevant peer reviewers automatically within minutes if not in seconds. Mixed reviews are a challenge to handling editors. Maximum reviews help the authors. However, maximum reviews often result in mixed reviews and views. This remains as a great challenge to publisher. ScholarOne is now licensed to Silverchair which operates from UK and China.

1.18.6 Editorial role:

The role of editors is critical in journal publishing. This does not just remain in handling the manuscript by sending to two reviews and making a decision based on two reviews. This may not be justifiable in most cases. The role of editors is to help edit the manuscripts towards improvement and engage the scientific community. Editors usually have dual jobs. Their main role is academia where they draw their salary. Editor’s role is often voluntary and inclusive in nature. The degree of justice in such scenario is debated. Very few editors are 100% dedicated as editors in journal publishing. Reading is easy, writing is difficult and editing is noble.

1.18.7 Comments and post publication reviews:

The journals welcome comments, letter to the editors and post publication reviews as comments from readers.

1.19 Open access (GOLD):

The journal is open access (GOLD).

1.19.1 Open access (OA) contribution:

An open access (OA) contribution (Production; indexing; CROSSREF DOI **[44]**, open access charge; Editorial expenses and maintenance charges) is applicable. This helps readers around the world to download articles for free of cost. Please be informed that OA contribution is applicable only for those manuscripts found suitable for publication in the journal after administrative checking followed by editorial and (or) peer reviews. We provide adequate discount upon kind request where feasible and applicable.

1.19.2 Waiver request:

Waiver request should be made during submission and it is possible to some extend through request and negotiation. Please be informed that 100% waiver is NOT possible as we are not funded by any Government agency.

1.19.3 Donations:

The journal welcomes donations and contributions to support, an open access publication. The readers can make voluntary contribution to the journal from as low as USD 1.

1.19.4 Discount offer:

Discount offer is available for authors who provide self-plagiarism check report using tools as described elsewhere **[50 - 53]** during submission. Please check with your institution for the availability of such tools. This will help speed up processing.

1.20 Withdrawal policies:

ScholarOne online or other third-party tools allows automatic withdrawal of manuscript before an initial and (or) a final decision is made for FREE. However, withdrawal is not automatically possible after an initial and (or) a final decision is made. These cases will be referred to the board (meets on a monthly basis) for a detailed discussion to take such decision where possible. It should be noted that a minimal processing fee is applicable for using the ScholarOne online software or other third-party tools in such cases where the petition is not absolutely fair and (or) justified. Please be informed that this is not applicable for rejected manuscripts.

1.21 Retraction policies:

The journal is fully open access and it takes all possible steps to comply with publishing ethics as per COPE guidelines **[36].** However, the features describing publishing ethics are often limitless in nature. Hence, we invite and entertain readers to report such issues to the publisher to analyse and investigate the corresponding data to take appropriate decision after a detailed discussion in a transparent manner.

1.22 Advisory Note:

Authors are advised to check their manuscript for any unacceptable degree of TEXT recycling using tools as described elsewhere **[50 - 52]** and made available at the host

institute. Please also upload a copy of such reports during submission to avoid delay in processing.

1.23 SCOPUS:

SCOPUS database **[48]** is a product of a major science and social publisher company named Elsevier Inc. **[6]** from Netherlands. The linked company is RELX INDIA PRIVATE LIMITED (CIN: U72900DL1996PTC077903) with Authorised Capital (INR) 177,10,00,000 and Paid-up Capital (INR) 154,63,28,520 as per MCA portal **[49]** and Wikipedia **[50]** as on March 31, 2020. Elsevier plays dual role both as a publisher and indexing resource creator. This position of Elsevier Inc. from Netherlands is clearly biased and ambiguous in nature. There is commerce involved and academia is misinformed by this position followed by their unwarranted marketing strategies within academia. Freedom of press is primary. There are COPE guidelines to balance data of all form in open access publishing models. The attempted service provided by Elsevier Inc. is exhaustive and therefore, the board taking such decision should be transparent, comprehensive, representative and exhaustive to uphold the freedom of the press and natural justice. A couple of dozen people should not make such decision to influence commerce at large across continents covering over about 8 billion people. Names and credibility of the board should be transparent and listed in both online and offline media. It is in the interest of transparency that the "turn-around time" to address and entertain any issue raised by the "so called" board (usually latent) should be less than 14 days and clearly not 3 or 4 years. The message with such intention is clearly biased and commercial in nature. Please be advised that commerce is a function of time. Justice delayed is justice denied. It should be noted that we credit Elsevier Inc. for maintaining Science Direct **[51]** for a price though commercial. The efforts to make contents in Science Direct accessible worldwide will be clearly noble. Please be informed that commerce is a part of economics around the world. It is also not fair to dominate the space

through monopoly aided by capitalism sponsored by banks in support of states. Grow and let others to grow too in a world dominant with democratic socialistic principles. Teach them, help them, embrace them and enlighten them where possible if you are in a better position. This should be all inclusive.

1.24 EBSCO:

EBSCO **[17]** is an indexing database provider from the USA. It is neutral in its operation that is fair and just. However, it sponsors the DOAJ **[53]** database that is latently linked to a Sweden based Lund University **[52]** with some unknown links to organizations in Netherlands.

1.25 Springer Nature Inc.

Springer Nature **[54]** (with several firms registered in India under different names as per MCA portal **[55]**) is a major science publisher from Germany and or Switzerland. The position taken by Springer Nature as a publisher in the open domain is unbiased. However, it is linked with a number of societies in Europe through "potential sponsor" related associations.

1.26 Web of Science:

Web of Science is a product of about 3.55 billion USD with about 100 million USD 2019 revenue (November 14, 2020; WIKI data **[50]**) Clarivate Analytics, Inc. **[14]** (Clarivate Analytics (India) Private Limited with CIN: U74999MH2016FTC283853 under Mumbai ROC, MCA India **[55]** having with an authorized Capital of INR 50,00,000 as on November 14, 2020) a data analytics company based in the USA. The position taken by Clarivate Analytics, Inc. is unbiased. However, Clarivate Analytics, Inc. as private entity influences commerce from academia through capitalism and listing of all known journals using transparent metrics

(optimal metrics which is neither conservative nor liberal) is highly warranted. In other words, all journals after 5 years (or 3 years as in previous precedence) since its launch should be given an Impact Factor **[55]** where possible in the interest of natural justice. Let the community make the decision and private parties should restrict themselves within certain limits where possible in the interest of transparency. Ranking with transparent metrics is acceptable. However, cut-off is not acceptable and it is unfair. This is not engagement. The service provided by Clarivate Analytics, Inc is exhaustive and therefore, the board taking such decision should be transparent, comprehensive, representative and exhaustive to uphold the freedom of the press and natural justice. A couple of dozen people should not make such decision to influence commerce at large across continents covering over about 8 billion people. Names and credibility of the board should be transparent and listed in both online and offline media. It is in the interest of transparency that the "turn-around time" to address and entertain any issue raised by the "so called" board (usually latent) should be less than 14 days and clearly not 3 or 4 years. The message with such intention is clearly biased. Please be advised that commerce is a function of time. Justice delayed is justice denied. A company capable of analysing such huge data in a many to many map models should be all inclusive and most transparent towards upholding the Freedom of the Press which is fundamental to any other debate in this regard. It should be noted that data from the under developed parts of the world is highly relevant for the advancement of science. This is not possible without a broad spectrum of engagement.

1.27 Pointless pondering on predatory publications

It is a pointless pondering on predatory (meaning greedy) publications (meaning journals) while practicing publishing through freedom of the Press. It should be noted that a weak publication will vanish itself in an open access publishing model where contents are made

available for free on the WWW. The fundamental question in this context is the definition of host and predator. The second question is the type (data and or commercial) and subsequent measure of effect of the predator on the host. Detailed discussion on this issue or any other related issue is welcomed under the freedom of the Press yet conclusion on it will be often biased and is clearly unwarranted. The parties aware of such concerns should write to the publisher (with address for communication) to take such action within such time to stand corrected. Please be informed that ISSN **[56]** is unique for each publication and portals for ISSN is distributed throughout the world in each country. This is well monitored and clearly streamlined. Therefore, NO two publication titles will be identical. Awareness from authors on misleading or misinformed or misrepresented ISSN is important and such information should be petitioned to ISSN and portals for ISSN that are distributed throughout the world with state mechanisms to monitor such activities. Academia should be self-aware on these issues and have discussions on the quality and quantity of data taken to the context. Caveat Emptor is applicable among the literate community as in this case to a considerable extend. The only problem could arise because of compromised (unregistered or mirrored) ISSN number published on the WWW which is already well regulated through DNS lookup. Therefore, parties concerned about ethical issues on scientific publishing should write to concerned publishers with known address to stand corrected or to ISSN and portals for ISSN or to DNS **[]** lookup where address is not available to correct such issues through available state mechanisms. Hence, biased advisory notes from government representations, society sponsored mass campaign through news/TV media and academic miss representation based on data collected by an individual without physical address for communication is clearly unwarranted in this regard. Science for service in a society is the success story of scientists with serenity **[39].** Hence, scholarly communication is critical.

Open access to known literature is critical in developing technologies for serving the society **[37].**

"Availability, accessibility and applicability of known scientific literature data is essential".

Publishers provide platforms to communicate scholarly materials by the formation, development and maintenance of journals with the help of adequate editorial and (or) peer-reviews where possible. This is a mammoth task and it is often non-trivial. Resources (software and hardware), investment and man hours are involved in this endeavour. Thus, development of a platform (media) for scholarly communications is noble.

"An idea becomes an asset in this process"

The famous data analytics company Clarivate Analytics Inc. **[14]** uses ~ 28 stringent parameters for the inclusion of a journal in their database. Therefore, there are non-linear models and mechanisms to streamline scholarly publications that are made available over the internet across the globe.

It should be noted that ISSN **[82]** is unique for each publication and portals for ISSN is distributed throughout the world in each country. This is well monitored and clearly streamlined. Therefore, NO two publication titles will be identical. Awareness from authors on misleading or misinformed or misrepresented ISSN is important and such information should be petitioned to ISSN and portals for ISSN that is distributed throughout the world with state mechanisms to monitor such activities. Academia should be self-aware on these issues and

have discussions on the quality and quantity of data taken to the context. *Caveat Emptor* is applicable to a considerable extend among the literate community as in this case.

"Engineering and technological developments using science data for service in the society are vital. This is possible through access to science data"

Compromised (unregistered or mirrored) ISSN number published on the WWW is already well regulated through DNS lookup **[83].** The parties aware of such concerns should write to the publisher (with address for communication) to take such action within such time to stand corrected. The fundamental question in this context is the definition of host (congregation) and predator (intruder). It should be noted that there are state mechanisms to monitor such issues. Detailed discussion on this issue or any other related issue is welcomed under the freedom of the expression (and (or) Press) yet conclusion on it will be often biased and is clearly unwarranted.

"Debate without communication is impossible"

Parties concerned about ethical issues **[84]** on scientific publishing should write to concerned publishers with known address to stand corrected or to ISSN and portals for ISSN or to DNS lookup where address is not available to correct such issues through available State mechanisms. Hence, biased advisory notes from government representations, society sponsored mass campaign through news/TV media and academic miss representation based on data collected by an individual without physical address for communication is clearly unwarranted in this regard. Thus, a weak publication will vanish (disappear) itself in an open access publishing model where contents are made available for

free on the World Wide Web (WWW). Hence, it is a pointless pondering (thinking) on predatory (meaning greedy) publications (meaning journals) while practicing publishing through freedom of expression (and or the Press) where applicable.

"Timely communication of scholarly materials is important"

Chapter 2

Scholarly journals from India are closed access and promoted by foreign publishers

2.1 Background:

Science for service in a society is the success story of scientists with serenity **[39].** Hence, communication of science data is imperative across continents. This is done using scholarly journal platforms promoted and managed by publishers. Further, availability, accessibility and applicability of science data for Engineering and Technology are paramount for social developments. In this regard, accesses to known scientific data through open access publishing models have gained momentum in recent years. The Challenges and other linked features in promoting open access to Bioinformation literature over about 2 decades is clearly documented **[58].** Analysis of science data is monitored through peer citation metrics. However, it is not a hard and fast rule for service in society. An evaluation of the backward and forward citation coverage of 59 databases citation indices reports on databases that are suitable for backward and forward citations **[68]**. A multidisciplinary comparison of coverage via citations shows differences in coverage among databases **[69]**. One analysis tries to help select between Web of Science versus SCOPUS **[70].** Strengths and weaknesses of PubMed, Scopus, Web of Science, and Google Scholar help to select between them as per requirement **[71]**. Another analysis shows that the median metrics in Web of Science's helps to overcome the major constraints of the journal impact factor **[72]**. Yet another analysis shows that PubMed has a sophisticated keyword optimization service, while both Scopus and Web of Science provide search analysis tools that can produce representative figures **[73]**. Discrepancies among coverage of funding information in medical journal articles in

Scopus and Web of Science is a concern too **[74].** The difference in citations in Web of Science, Scopus and Google Scholar is also alarming in using these databases **[75]**. Thus, there are several databases that are available for science data analysis. However, Wos and Scopus are highly popular across continents and particularly in India among educational institutions due to their belligerent marketing strategies. This is so much so that many educational institutions openly force faculties to publish their findings in Scopus indexed journals despite freedom of expression which is primary. Hence, there is control through coverage with some of these databases. It should be noted that SCOPUS is a product of Elsevier Inc. (Netherlands) with its sister companies RELX and LexisNexis **[76].** Web of Science is a product of Clarivate Inc. which is owned by Onex Corporation (Canada) and Baring Private Equity Asia (Hong Kong) **[77]**. Further, Elsevier Inc. and Clarivate Inc. have large scale business operations in India and in most regions of Asia **(Figure 2.1)**. Therefore, it is of interest to report the influence of foreign publishers in promoting scholarly journals from India to be indexed in WoS and SCOPUS with limited open access.

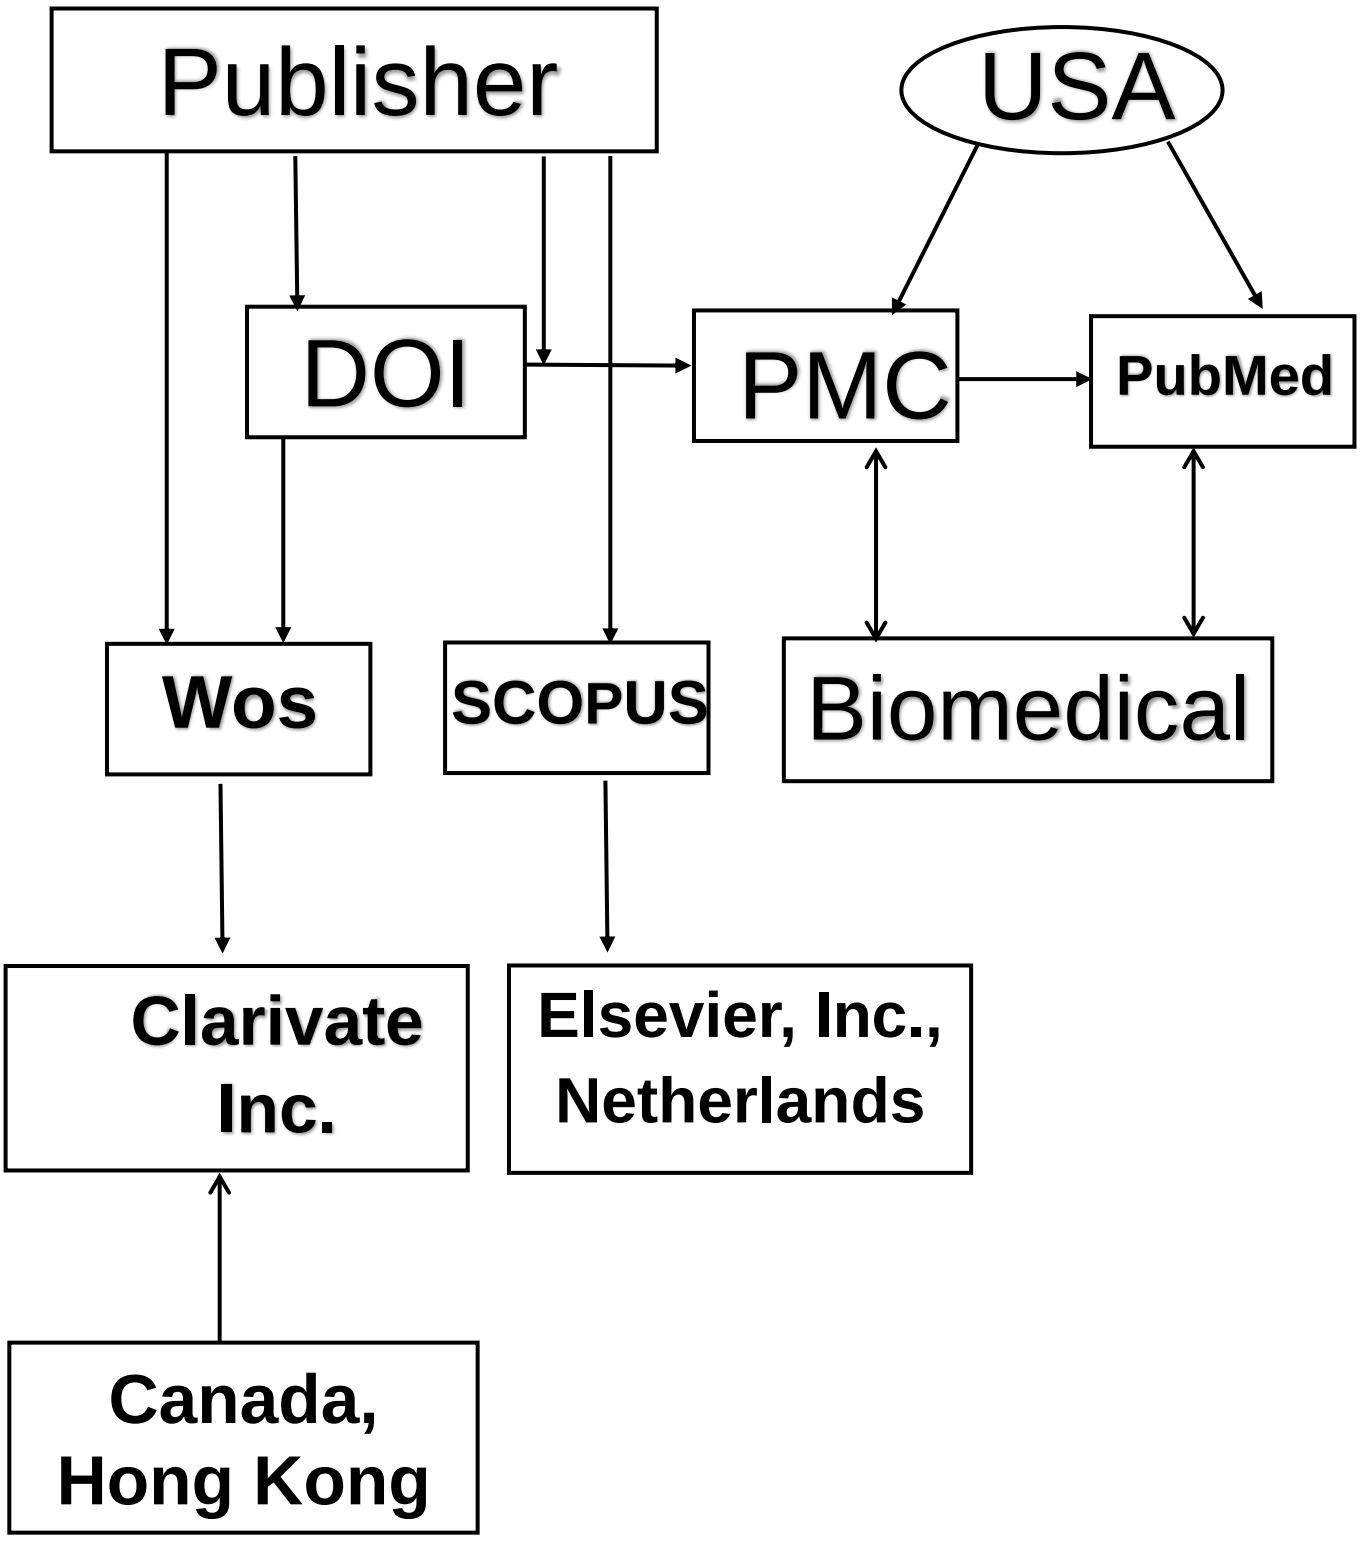

Figure 2.1: Development and sustainability of scholarly data by different parties.

WoS: Web of Science; **PMC**: PubMed Central;

Table 2.1: Difference between WoS and SCOPUS generated by Google AI.

Features	Primary Focus	Owner	Journal Count	Flagship Metric	Historical Depth	Disciplinary Strength
WoS	Quality and selectivity (“Journals of Influence”)	Clarivate Analytics	-21, 000 journals	JIF	Records back to 1900	Natural sciences, medicine, engineering
SCOPUS	Breadth and inclusivity	Elsevier	-27, 000-28, 000 journals	CiteScore	Records back to 1970 (limited to 1788)	Social sciences, arts, humanities, engineering

WoS: Web of Science**; JIF:** Journal Impact Factor**;**

Table 2.2: India origin journals in WoS (2026).

Total WoS-Indexed Indian Journals	**326**
Total Open Access Indian Journals in WoS	**104**
Total Non-OA Indian Journals in WoS	**222**
Open Access % Indian Journals in WoS	**31.9%**
Closed Accedd Indian Journals in WoS	**68.1%**

Table 2.3: WoS indexed Indians journal published by foreign and Indian Publishers.

Category	Journal Count	% of Total	OA Journals	Non-OA	OA %
Genuinely Indian	114	35%	23	91	20.20%
Indian subsidiary of foreign companies MNC	148	45.40%	67	81	45.30%
Foreign (Headquartered Abroad)	64	19.60%	14	50	21.90%
TOTAL	326	100%	104	222	31.90%

MNC: Multi-National Companies; OA: Open Access;

Table 2.4: WoS indexed Indian journals published by foreign publishers.

	Journal Count	% of Foreign
USA	24	37.50%
UK	24	37.50%
Netherlands	8	12.50%
New Zealand	2	3.10%
Germany	2	3.10%
Singapore	1	1.60%
Denmark	1	1.60%
Thailand	1	1.60%
Switzerland	1	1.60%

Table 2.5: Distribution of Indian journals in Web of Science (a product of Clarivate Inc.) under their categories.

Category	Journal Count	% of Total
Emerging Sources Citation Index	230	70.60%
Science Citation Index Expanded	82	25.20%
Social Sciences Citation Index	6	1.80%
Arts & Humanities Citation Index	5	1.50%
Science Citation Index Expanded | Social Sciences Citation Index	2	0.60%
Social Sciences Citation Index | Arts & Humanities Citation Index	1	0.30%

Table 2.6: Indian journals in SCOPUS (a product of Elsevier Inc.).

SCOPUS indexed Indian Journals	**451**
Active Journals	**322**
Inactive (Discontinued) Journals	**129**
SCOPUS indexed Open Access Journals	**140**
SCOPUS indexed Non-OA Journals	**311**
SCOPUS indexed Open Access %	**31.0%**
SCOPUS indexed Non OA %	**69%**

OA: Open Access

Table 2.7: SCOPUS indexed Indian journals published by foreign and Indian publishers.

Category	Total	% of Total	Active	Inactive	OA	Non-OA	OA %
Genuinely Indian	211	46.80%	117	94	15	196	7.10%
Indian Subsidiary of Foreign MNC	240	53.20%	205	35	125	115	52.10%

Table 2.8: TOP 15 publishers for SCOPUS indexed Indian journals.

Imprint Group	Journal Count	Type	% of Total
Wolters Kluwer Health	184	Foreign MNC	40.80%
SAGE	35	Foreign MNC	7.80%
Springer Nature	20	Foreign MNC	4.40%
Jaypee Brothers Medical Publishers (P) Ltd	17	Indian	3.80%
Institution of Engineers (India)	16	Indian	3.50%
IP Innovative Publication Pvt. Ltd.	12	Indian	2.70%
Indian Academy of Sciences	7	Indian	1.60%
Pushpa Publishing House	7	Indian	1.60%
Research India Publications	7	Indian	1.60%
Scientific Publishers of India	7	Indian	1.60%
National Institute of Science Communication and Information Resources (NISCAIR)	5	Indian	1.10%
Innovare Academics Sciences Pvt. Ltd	4	Indian	0.90%
Indian Council of Medical Research	4	Indian	0.90%
Indian Council of Agricultural Research	3	Indian	0.70%
Indian Pharmaceutical Association	3	Indian	0.70%

2.2 WoS versus SCOPUS: 2026 Google AI [78]:

Web of Science (WoS) and SCOPUS are the two most prominent bibliographic databases used for academic research and evaluation **(Table 2.1)**. While they overlap significantly, they differ in their philosophy, coverage, and the metrics they provide.

2.3 Coverage & Inclusivity:

SCOPUS offers roughly 25-30% more journals than WoS. It is known for better coverage of non-English and regional literature, particularly from Asia and Latin America.

WoS is more selective, prioritizing high-impact journals. It is often considered more "prestigious" due to its stricter inclusion criteria.

2.4 Citation Metrics:

2.5 Impact Factor (WoS): The most globally recognized measure of journal quality, used heavily in faculty promotions and grant evaluations.

2.6 Cite Score (SCOPUS): Uses a longer (four-year) citation window compared to JIF's two-year window and is generally more transparent in its calculation.

2.7 Citation Counts: Researchers typically see higher citation counts in SCOPUS because it indexes a larger pool of citing journals.

2.8 User Experience & Tools:

SCOPUS is frequently praised for a more modern, intuitive interface and better visualization tools for author and institutional analytics.

WoS offers powerful advanced search features and unique tools like Cited Reference Search, which allows you to trace how a specific work has been cited over time.

2.9 Regional and Format Differences:

2.9.1 Conference Papers:

SCOPUS has more extensive coverage of conference proceedings, making it a favourite for Computer Science and Engineering researchers.

2.9.2 Non-English Literature:

SCOPUS indexes significantly more non-English content (if English abstract is provided).

2.9.3 Google AI suggestion:

Use SCOPUS if you are conducting a systematic review and need the most comprehensive results, or if your research is in the social sciences, humanities, or an interdisciplinary field.

Use Web of Science if you need historical data dating back several decades, or if your institution specifically requires Journal Impact Factor (JIF) for evaluations. For the most thorough results, many experts at institutions like Iowa State University and Arizona State University recommend searching both databases to ensure no critical research is missed.

2.10 Publisher Origin Analysis:

2.10.1 WoS-Indexed Journals from India:

2.10.2 WoS-indexed journals promoted by foreign publishers:

Although 262 of 326 journals (80%) are registered with Indian addresses **(Table 2.2)**, only 114 (35%) are run by genuinely Indian publishers **(Table 2.3; Table 5.1 and Table 5.2)**. The remaining 148 India-registered journals are operated by Indian subsidiaries of foreign

multinational publishers (Wolters Kluwer, Springer Nature, SAGE, Elsevier) **(Table 2.4)**. Combined with the 64 journals headquartered abroad, foreign-controlled publishing accounts for 212 of 326 (65%) of WoS-indexed journals classified as "Indian" **(Table 2.5)**.

2.11 SCOPUS-Indexed Journals:

2.11.1 SCOPUS-indexed Indian journals run by foreign multinationals:

Although 451 Scopus-indexed journals are listed under Indian publishers **(Table 2.6)**, only 211 (47%) are run by genuinely Indian publishers **(Table 2.7; Table 5.3 and Table 5.4)**. The remaining 240 (53%) are operated by Indian subsidiaries of four foreign multinationals: Wolters Kluwer Medknow (184 journals), Sage Publications India (35), Springer India (20), and Reed Elsevier India (1). Of the 140 Open Access journals in the list, 125 (89%) belong to foreign MNC subsidiaries and genuinely Indian publishers contribute only 15 OA journals in Scopus. Among the 129 inactive/discontinued journals, 94 (73%) are from genuinely Indian publishers, indicating significantly higher attrition for domestic publishing operations **(Table 2.8)**.

Chapter 3

Conclusion

It is of interest for a comprehensive discussion on issues to make known literature available and accessible for social application through open access publishing models within the ethical guidelines of Creative Commons (CC) and Committee on Publication Ethics (COPE). Hence, we highlight data related to these issues with improved essential resources in a representative manner for societies across the world for eradicating poverty by upholding freedom, equality and liberty with natural justice. The WoS and SCOPUS databases have included about 300 Indian Journals. This accounts for about 1.4% journals in the database. Nonetheless, about 68% of these journals are closed access and it is managed by foreign publishers such as Wolter Kluwer, Springer, Elsevier, Francis and Taylor *etc*. This is a 2026 concern for technological embargo while balancing creativity and freedom of expression. We thus document the challenges and linked features in promoting open access to literature.

TABLE OF CONTENT

	Content			Page no.
Chapter 1			Introduction	14
	1.1		Science for service in a society	14
	1.2		Academic Literature Data	14
	1.3		Data Commerce	16
	1.4		Open Access to Literature	16
	1.5		Biomedical Data	17
	1.6		Data Ethics and Integrity	21
	1.7		Open access (OA)	21
	1.8		Open access (OA) and Scientific community	21
	1.9		Science, Scientist, Society and Service	24
	1.10		Author contributions in Biology	24
	1.11		Freedom of Expression	24
	1.12		Role of Governments	27
	1.13		Academic Freedom	27
		1.13.1	Note on service	28
	1.14		Declaration by authors on publication ethics for submission	28
	1.15		Content Licensing	28
	1.16		Publishing Ethics	28
	1.17		Processing Speed	28
	1.18		Presentation of a manuscript: Writing Quality:	29
		1.18.1	Background data	29
		1.18.2	Short conclusion	29
		1.18.3	Plagiarism Check	29
		1.18.4	Review Process	29
		1.18.5	Timely Peer Review	30
		1.18.6	Editorial role	30
		1.18.7	Comments and post publication reviews	31

	1.19		Open access (GOLD)	31
		1.19.1	Open access (OA) contribution	31
		1.19.2	Waiver request	31
		1.19.3	Donations	31
		1.19.4	Discount offer	32
	1.20		Withdrawal policies	32
	1.21		Retraction policies	32
	1.22		Advisory Note	32
	1.23		SCOPUS	33
	1.24		EBSCO	33
	1.25		Springer Nature Inc.	33
	1.26		Web of Science	33
	1.27		Pointless pondering on predatory publications	35
Chapter 2			Scholarly journals from India are closed access and promoted by foreign publishers	40
	2.1		Background	40
	2.2		WoS versus SCOPUS: 2026 Google AI	51
	2.3		Coverage & Inclusivity	51
	2.4		Citation Metrics	51
	2.5		Impact Factor (WoS)	51
	2.6		Cite Score (SCOPUS)	51
	2.7		Citation Counts	51
	2.8		User Experiences & Tools	51
	2.9		Regional and Format Differences	52
		2.9.1	Conference Papers	52
		2.9.2	Non-English Literature	52
		2.9.3	Google AI Suggestion	52
	2.10		Publisher Origin Analysis	52
		2.10.1	WoS-Indexed Journals from India	52
		2.10.2	WoS-indexed journals promoted by foreign publishes	52
	2.11		SCOPUS-Indexed Journals	53
		2.11.1	SCOPUS-Indexed Indian journals run by foreign multinationals	53
